+ = Resistant

The material remains fully resistant to the medium or is only minimally affected. The effect of pressure and temperature changes on the materials must be taken into account.

O = Resistant with limitations

The material is affected by the medium; sealing compounds well up. If concentration, pressure, temperature, durability and other influential factors are restricted, application may be possible.

U = Non-resistant

The material may not be used in the specified medium or at the given temperature, unless under very clearly defined preconditions.

/ = no data available
